

# Stacking and packaging equipment

Stacking and packaging equipment constitute an important factor in exploiting mass production optimally with our plant. That's why we developed a fully automatic packaging station of compact size for small piping.

**Exploit mass production  
to the maximum.**

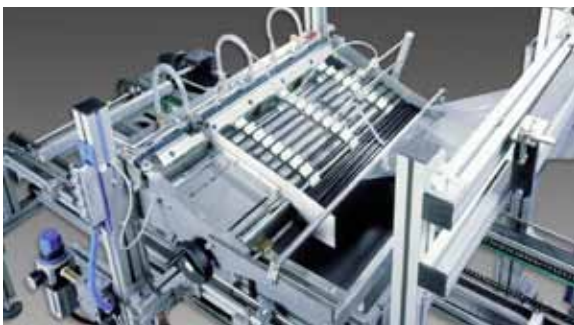

This stacking equipment is particularly suitable for high speed and fixed length.

*Fixed stacking*

## Fixed stacking and packaging system capabilities examples:

Product	Length (mm)	External diameter (mm)	Extrusion speed (m/min)	Performance (pieces/min)
Q-tips	72.5	2.5	500	6890
Lolly sticks	90	3.8	180	2000
Drains	130	4.34	200	1480
Refill tubes	110	2.8	200	1800

*Vario stacking*

We have further developed our packaging station in response to demand.

Vario stacking makes fully automated packaging of differing item lengths from 80 to 800 mm feasible.

Vario stacking is suitable for slow running products with an extrusion speed up to 50m/min.
